

People: Susan Dumais **Institution:** Microsoft Research
Project : PSearch: An interface for combining personal and general results

What?

Interface to combine personalized search results with general results.

Re-ranking of general web results

Access to your web cache, desktop search index

Results so far:

Alternative interface options

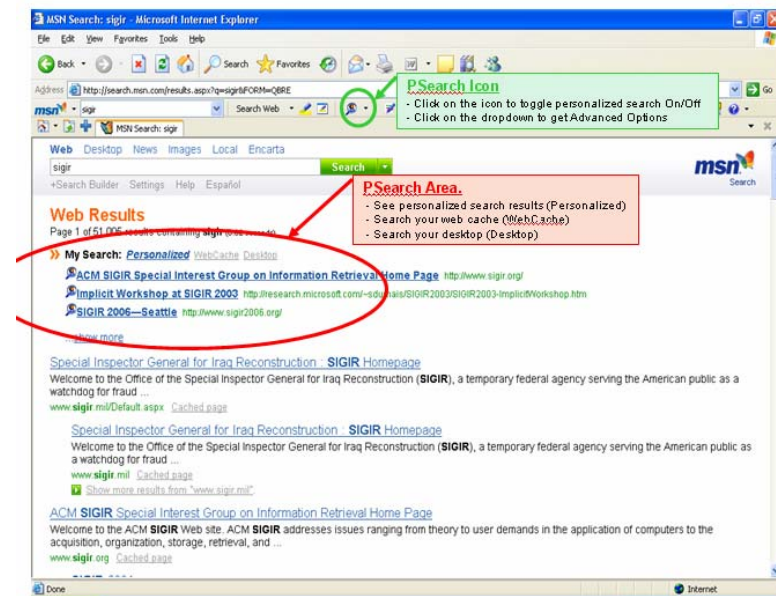

Internal deployment and feedback

Why?

Today's search: one-size-fits-all. Everyone who issues the same query gets the same results.

Personalized search: have it your way. Desktop search index provides rich and evolving user profile.

Graphic:

How?

PSearch-Algorithm: uses content match and previous usage history to re-ranks web search results based on a rich client-side profile.

PSearch-UI: uses bifurcated list to show personal region along with regular search results.
